1. This communication is in response to applicants' amendment filed on December 16, 2002.
2. Claims 1-10 and 38-47 have been cancelled and cannot be reinstated. Also, Claims 21-29 and 58-66,75-76 have been cancelled.
3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-20,48-57,77-78 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hubans (5,233,304) in view of Segesman (4,360,777).

Hubans discloses an apparatus for monitoring a characteristic of a reservoir including a tubular 25 having an elongated body with a longitudinal axis, the tubular being adapted for permanent disposal in the borehole; and at least one antenna 5 in a slot disposed on the exterior of the tubular. Hubans fails to show the antenna being electronically steered for directional measurement.

However this feature is known in the art as evidenced by Segesman. Segesman

Art Unit: 2862

teaches to activate the antennae to electronically steer the sensing direction of the transmitted and/or received electromagnetic energy. Consequently, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the device of Hubans to have included the antennae configuration as disclosed by Segesman so that the measurements can be selectively electronically measured.

4. Applicants arguments with respect to claims 11 and 48 have been considered but are not persuasive.
